Safety Method Statement

The Safety Method Statement sets out safe systems of work for hazardous operations. It should be included in the construction H & S plan together with any subcontractors' safety method statements. It should clearly show how the work will be supervised, how it will be monitored and provide practical control measures.It should include protective equipment requirements and explain first aid and emergency requirements. It should suitable for explaining the work method in a task talk.

Read more at Method Statements.

Work Activity/Task: _____ **Project Name/No:** _____

Supervisor: _____ **Principal Contractor:** _____
